

Infusion Analytics Service

for Alaris® products

Your key to actionable infusion information

Discover a fresh and concise view of infusion activity that will simplify your workload and save you time. The Infusion Analytics Service delivers the actionable infusion information needed to quickly monitor performance while focusing on patient care.

- Identify highest risk medication practices and potential costs of averted errors
- Determine which medications are most frequently overridden
- Discover trends in preventable adverse drug events
- View the information necessary to align medication guidelines to medication practice
- Understand common programming errors

Having your Alaris® System data analyzed and reviewed every month makes it easy to answer critical safety questions. The information is presented in clear, intuitive reports that provide fast access to the most relevant insights.

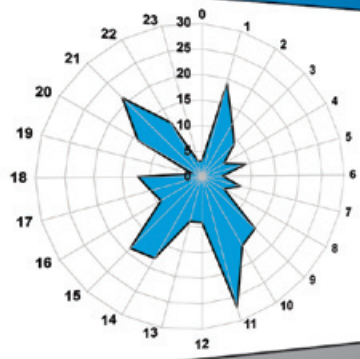

Harm Index Overview Report

Top 10 Harm Index Drugs

Drug Name	Minimal	Moderate	Severe	Total
insulin drip	151	16	15	182

EPIneprine	3	0	0	3
Total	169	36	47	252

1. Provides information on possible errors avoided

Harm Index Chronogram

2. Provides insight on time of alerts

All Harm Index Detail

- Key Takeaways:**
- A total of 53 severe potential Preventable Adverse Drug Events (PADEs) were averted in the current period. 47 of these PADEs came from the top 10 drugs.
 - Evaluate Hospital Protocols to determine opportunities for improvement.
 - The potentially harmful events occurred more frequently at 11 AM.
 - Evaluate nursing and pharmacy workflow to determine if opportunity areas exist.

3. Provides actionable information

“We are very impressed by the product—we like the clarity of the tables and the take aways.”

Rita Haxton
 Vice President of Patient Care Services
 Rapid City Regional Hospital
